

**RENEWABLE ENERGY INTERNET RELEASE**  
**PRINT DATE MAY 8, 2016 PAGE ONE**

**ELECTRICITY...**Oil Free LLC eliminates the use of fossil fuel completely as it implements the Wallace HOD Systems that produce Hydrogen on Demand, exclusive of using hydrogen storage cells. Hydrogen a [GAZ] fume in this state can be a very low cost renewable fuel eliminating diesel or methane natural gas. HOD can be used to fuel various Gensets manufactured here in America by Caterpillar, Cummings and General Electric. Concurrently, the Wallace HYDROGEN ON DEMAND[HOD] SYSTEMS addresses two (2) additional critical situations, first is the elimination of any carbon footprint and secondly the ultimate reduction in the ever increasing number of earthquakes caused by disposal of brine water, a by-product of the oil & gas process, into deep disposal wells(not fracking)...Sunday May 8, 2016 at 7:00PM EST the third segment of 60 Minutes, a CBS production, is certifiably global notice about the dangers of drilling for oil as identified in the States of Oklahoma and Kansas.

1. Caterpillar, Burns & McDonnell and Mid-Kansas Electric located near Ulysses, Kansas designed and constructed a power generation facility which provides 110 MW of electricity 24/7. The Caterpillar Gensets now can operate on diesel fuel or methane natural gas...if the Wallace HOD system was installed individually on each of the 12 Gensets at a one-time royalty cost of \$2 Million dollars per Genset the annualized operational costs would be reduced by 75-90%. The Wallace HOD System uses fresh or clean sea water in a 10:1 ratio. This means it takes only one gallon of water to produce ten(10) gallons of hydrogen fumes[GAZ].

The Mid-Kansas Electric project and can be viewed by going to Google and search the following: Power Generation Ulysses Kansas and then select Power Profile, a complete description of the project from evaluation through design, engineering, construction and now operation solved their electricity requirements.

2. The Video which demonstrates the Wallace HOD System producing hydrogen can be viewed by going to our website [www.oilfreelc.com](http://www.oilfreelc.com) Home Page which displays several Menu Keys the VIDEO is password protected, that password is bingobingobingo which can be entered when prompted allowing your viewing of the hydrolyzer producing hydrogen.

There is also a 3 Page Video narrative which can be accessed on the website Home Page by the appropriate Menu Key.

The Video and the 3 page transcript genuinely evidence the success of a Wallace HOD first (1<sup>st</sup>) generation hydrolyzer having a physical size of nine (9") inches cubed. The

RENEWABLE ENERGY INTERNET RELEASE  
PRINT DATE MAY 8, 2016 PAGE TWO

Hydrolyzer successfully and continuously was able to deliver in excess of 200 liters of hydrogen fumes[GAZ], not a solid liquid. This hydrolyzer can produce enough hydrogen fuel from one gallon of water to fuel a vehicle with a 500 HP (or less) engine to travel 1,000 miles.

3. LIGHTS OUT by Ted Koppel and published by Random House on October 15, 2015 was written after eighteen (18) months research by his staff and his personal interviews with Homeland Security Secretary Jen Johnson, Dr. Ernest Moniz Secretary of Energy and National Security Administration's General Alexander. Each confirmed that a cyberattack was most likely, that the nation is unprepared and the aftermath if the outage lasts much longer than three (3) days it could cause a real ARMAGEDDON. No Electricity, No Food, No Water, No Fuel, No Law Enforcement and No Hospital Care.

The last two (2) Administrations since 9/11 will be labeled as reactionary; collectively to date there have been no preventative measures established that would prevent a terrorist or a group which are already here in the US along with those entering through illegal immigration who without endangering themselves could fly drones with explosives to critical Grid structures and destroy the entire Grid with the same expertise as used on 9/11. Armageddon would then become a reality...there is a cure please review the outlined JOBS, JOBS and More JOBS.

4. A NEW US GRID as perceived by the late Beau Biden; a visionary, Beau requested Oil Free LLC to create a document detailing how to build a new Grid for the State of Delaware without using any Taxpayer dollars, he approved and accepted this document once completed and believed that it would allow for the same to be applied for the remaining 49 States. This document dated February 17, 2015 was an integral part of the Letter to J.P. Morgan Private Banking, a five 5 page document dated April 27, 2015. This document can be viewed by selecting the J.P. Morgan Menu Key on Oil Free LLC's website [www.oilfreellc.com](http://www.oilfreellc.com) The Delaware document is the second attachment to that letter. Pay particular attention to Pages 4,5 and 6. of the document.

As clearly defined in 5. Below this draft analysis using straight line math is an ultra-conservative estimate demonstrating a new employment structure to build a very modern and technology advanced electric grid with impregnable encryption using No Taxpayer dollars. Please see JOBS, JOBS and More JOBS.

## JOBS, JOBS, and more JOBS

### A NEW U.S. INDUSTRIAL REVOLUTION an AMERICAN EXCEPTIONALISM DEFINED

#### THE NEW U.S. GRID

The forecasted estimate below has been modeled from the source information obtained from the State of Delaware Records. The information contained in the 24 Page document dated February 17, 2015 addressed to Josh Alcorn@Biden.com and authenticated by former Delaware Attorney General Beau Biden shows how replacing the U.S. Grid can be accomplished WITHOUT USING ANY TAXPAYER DOLLARS by issuing 6% tax free Municipal Bonds. Details are available at [www.oilfreellc.com](http://www.oilfreellc.com)

a) For every one million in population there needs to be 400 gensets that will be fueled with hydrogen produced by Oil Free LLC's NEW Wallace HOD System {hydrogen on demand}. Utilizing the proven Caterpillar G20CM34 10MW genset, a natural gas fired reciprocating generator, as used by Mid-Kansas Electric at the Rubart Station facility near Ulysses, Kansas.

b) Requirements

To build a new Grid with 100% underground waterproof wiring that will allow those gen sets to be installed in specially designed containment buildings having a wind load rating of at least 200 mph and an internal overhead crane to have 100% of all equipment at a minimum of eight feet off the ground. This design would allow for uninterrupted and continuous production of electricity regardless of any type of disaster.

#### Calculations to be Defined

Current Population of the U.S. is 330,000,000; assuming a 10 year growth of 20% = 396,000,000 (for ease of calculations, rounding up) 400 million is an expected basis.

400 million population x 400 gensets per million in population = 160,000 gensets (16,000 per year).

**RENEWABLE ENERGY INTERNET RELEASE**  
**PRINT DATE MAY 8, 2016 PAGE FOUR**

**New U.S. Grid Valuation**

Genset cost from Caterpillar FOB to location is about \$5,000,000 each.

Requirement 160,000 Gensets

Total \$800,000,000,000

Raw Materials for the design of the new housing structure with the understanding there would be 8-12 Gensets per housing structure is about \$1,000,000 per genset.

The Total dollars for the Genset Housing Requirement is 160,000(Gensets) times \$1,000,000 per Genset

Total of \$160,000,000,000

Remaining funds for anticipated labor (jobs) factors is \$4,000,000 per Genset Times 160,000 gensets

Total of \$640,000,000,000

CALCULATIONS ARE FOR A 10 YEAR GROWTH PROGRAM.

c) YEARLY SUMMARY TOTALS

POPULATION INCREASES	7,000,000
GENSET EQUIPMENT PURCHASES	\$80,000,000,000
HOUSING INFRASTRUCTURE	\$16,000,000,000
LABOR EXPENDITURES	\$64,000,000,000
{CREATING 640,000 NEW JOBS}	

d) NON-NEW GRID JOBS

- 1,200,000 JOBS TO MANUFACTURE 16,000, 20,000 HORSE POWER 10 MW GENSETS
- TRUCKS/TRUCKERS FOR TRANSPORTATION OF EQUIPMENT QUANTITY UNKNOWN.

e) Year 11 will require a POPULATION ANALYSIS for yearly forecast to go forward.

RENEWABLE ENERGY INTERNET RELEASE  
PRINT DATE MAY 8, 2016 PAGE FIVE

f) Year 11 Genset Housing will require a financial forecast for maintenance and upgrades but estimates reflect that the annualized cost for 10 years forward should not exceed the original cost of construction of \$1,000,000 per genset.

g) Year 11 Labor, forwarded annually for 10 years will be \$4,000,000 per genset. This labor factor will be for the removal of the gen sets to be rebuilt and overhauled by the gen set manufacturer and includes all re-installation costs.

NO TAXPAYER DOLLARS The NEW Grid can be completed without using any taxpayer dollars. Beginning in February of 2015 a request was made by former Delaware Attorney General, Beau Biden and his political assistant Josh Alcorn to introduce the Wallace HOD System to the world beginning with the State of Delaware and outlining how their state can reduce electricity costs by 50% based on their population, with NO TAXPAYER DOLLARS being spent. It was at that time, Oil Free LLC, under my direction and A. Michael Ruggiero, Director of Manufacturing developed the February 17, 2015, 24-page Delaware Exhibit document for their review and consideration. Several weeks later Beau Biden, in a short telephone conversation with Leonard D. Wallace, stated the 24-page Delaware document was distributed to the appropriate people at the White House and they were very receptive to the information and technology, which would reduce electricity costs by 50% for the American citizens.

Regards,

Leonard D. Wallace
